**DETAILED ACTION**  
**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Richard C. Salfelder on 09/16/2008.

The application has been amended as follows:

Claims 1, 13-16 are canceled.

**REASONS FOR ALLOWANCE**

Claims 2-12 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to an intelligent skip method for video reproducing apparatus.

The following is a statement of reasons for the indication of allowable subject matter: The independent claim 2 identifies the uniquely distinct feature for "calculating a GOS, to which a reproduction location of a current media belongs, according to a user's intelligent skip request, based on a current reproduction location of

Art Unit: 2621

a media and a shot segmentation information or GOS information constituted with one long shot or a sequence of shot shots;

determining whether the user's intelligent skip request is forward or reverse, based on the calculated GOS (GOScur) to which the reproduction location of the current media belongs;

if the user's intelligent skip request is the forward skip request, setting a start time of a next GOS (GOScur+1) as a start time of a normal reproduction restart, and if the user's intelligent skip request is the reverse skip request, setting a start location of a GOS (GOScur), to which a reproduction location of a current media belongs, as a start time of a normal reproduction restart or setting a GOS (GOScur-1), which is before one from the GOS to which the reproduction location of the current media belongs, as a normal reproduction restart location”

The following is a statement of reasons for the indication of allowable subject matter: The independent claim 5 is identifies the uniquely distinct feature for “calculating a GOS to which a reproduction location of a current media according to a user's intelligent skip request and determining whether a type of the GOS is a GOS defined as one long shot or a sequence of short shots;

based on the GOS (GOScur) to which the calculated reproduction location of the current media belongs, determining whether the user's intelligent skip request is forward or reverse;

if the user's intelligent skip request is the forward skip request, setting a start location of a GOS, which is nearest from the current location among following GOSs

Art Unit: 2621

(GOSr:r>cur) each being constituted with one long shot, as a start time of a normal reproduction restart;

if the user's intelligent skip request is the reverse skip request and the GOS (GOScur) is a GOS constituted with one long shot, setting the start location of the GOS, to which the reproduction location of the current media belongs, as a start time of a normal reproduction restart time, or setting a start location of a GOS, which is nearest from the current location among GOSs (GOSr:r<cur) each being constituted with one long shot before the reproduction location of the current media, as a start time of a normal reproduction restart;

if the user's intelligent skip request is the reverse skip request and the GOS (GOScur) to which the reproduction location of the current media belongs is a GOS constituted with a sequence of short shots, setting a start location of a GOS, which is nearest from the current location among the GOSs (GOSr:r<cur) each being constituted with one long shot before the reproduction location of the current media, as a start time of a normal reproduction restart”

**Nakajima et al., US 5,754,728** discloses to provide a fast video browsing system in which a fast playback suitable for keeping track of the contents can be performed by adaptively determining the number of skipped pictures according to the motion vector of picture, and displaying the picture after the skipped pictures. In step S1, pictures to be fast viewed are sequentially inputted, and in step S2, n pictures are skipped. In step S3, the picture after the n skipped pictures is displayed. In step S4, using the picture

Art Unit: 2621

before or after the displayed picture with respect to time, a motion vector at one frame interval is detected, and in step S5, the number n of skipped pictures is determined from the motion vector. As a result, the number of skipped pictures can be adaptively determined by the motion vector of a picture.

**Kuroiwa et al., US 6,490,404** discloses in case that a skipping section is provided by editing in a recording region other than a recording region for block data in an information recording medium recorded with at least more than one collation table of time recording location, which is composed of more than one collation data by each fixed time interval and time compensating data, a collation table of time recording location is read out from the information recording medium and divided in response to a designated skipping period. A collation data, which assigns block data of designated skipping period, are deleted. A second time compensating data is calculated in response to the skipping period. Combining the second time compensating data with collation data succeeding the deleted collation data composes a new collation table of time recording location. The new collation table of time recording location is written back to the information recording medium in conjunction with a collation table of time recording location temporally preceding the deleted data.

None of the prior art, either singularly or in combination, fails to anticipate or render the above underlined limitations obvious. Claims 3-4, 6-12 are dependent on claims 2 and 5 and therefore dependent claims also allowable.

Art Unit: 2621

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
